

About this Course

Jacking up a vehicle is serious business and not to be taken lightly. Many incidents have killed or injured a person for life because of careless mistakes. A high percentage of incidents are the result from working under an improperly supported vehicle, having a jack slip out, and crushing the individual working on the vehicle.

This is one of the most dangerous tasks when conducting any type of wheel service, particularly if the proper procedures are not followed.

In this training module, we'll show you how to conduct this inherently hazardous task more safely. The average student will require approximately 25 minutes to complete both the course and quiz.

Course Outline

Introduction

PPE

- Personal Protective Equipment

Pre-Use

- Equipment & Pre-Use Inspection

Preparation

- Worksite Preparation
- Securing the Vehicle
- Jack Selection
- Jack Placement

Typical Procedures

- Jacking the Vehicle
- Jack Stand Placement
- Lowering to Jack Stands
- Conducting Work
- Removing Jack Stands
- Lowering the Vehicle

Special Procedures

- Air-Equipped Suspension
- Lifting with Loaders

Mastery Quiz (80% to pass)

Verification Techniques Employed

- ✓ **Identity:** Unique usernames and passwords.
- ✓ **Security:** Bank-level encryption.
- ✓ **Certificate Verification:** Certificates contain a verification code that can be checked on MyOTF.com.
